

Same question for all teams:

Present your project in 2 minutes taking into account the 4 criteria on the board.

Respected the time
limit.

Presented according to
the 4 criteria.

Same question for all teams:

Does the project reduce waste or encourage recycling?

Respected the time limit?

Does the project significantly decrease the amount of waste produced or does it only make a minor impact?

Does the project introduce new methods or techniques for recycling materials, or improve upon existing ones?

Same question for all teams:

Does the project involve any negative impact on natural habitats or biodiversity?

Respected the time limit?

Has a thorough assessment been conducted to identify any potential negative impacts on natural habitats or biodiversity?

If potential negative impacts have been identified, does the project propose effective strategies to mitigate or offset them?

**How does the
project contribute to
sustainability?**

Respected the time limit?

Does the project incorporate renewable or long-lasting materials and resources?

Does it promote a circular economy (use, reuse, recycle) model? Is there a Life Cycle Analysis (LCA) incorporated into the project?

**Can the project
adapt to changes in
the environment or
market?**

Respected the time limit?

Does the project design allow for modifications and improvements such as changing requirements or technological advancements?

Has the project considered potential future challenges and developed contingency plans?

Is the project
"feasible" taking
into consideration
factors such as
resources and
constraints linked to
its environment?

Respected the time limit?

Has a thorough feasibility study been conducted, considering factors such as cost, time, and technical expertise required? Are there plans in place to address potential obstacles or roadblocks?

**Can the project
be efficiently
scaled up or
down ?**

Respected the time limit?

Does the project have a scalable design that allows it to expand or contract according to demand? Does it maintain effectiveness and efficiency when re-scaled?

**Does the project
promote social
equity and
inclusion?**

Respected the time limit?
Does the project take into account the needs and abilities of various demographic groups? Does it make an effort to reduce social disparities, for instance, by making technology or resources more accessible or affordable?

Does the project encourage education and awareness about sustainability and frugal technology?

Respected the time limit?

Does the project incorporate elements that make the users or public aware about the importance of sustainability and frugal use of technology?

Is there a plan to track and improve its impact?
