

QCM

Which of these is NOT a principle of sustainability?

- A. Use of renewable resources
- B. Minimization of waste
- C. Over-consumption of resources
- D. Consideration of social equity

C. Over-consumption of resources

T-F?

Adaptability in a project means that the project can only change in response to environmental changes, not market changes.

True or False ?

False.

Adaptability means the ability to change in response to both environmental and market changes.

TOP3

List the top three factors that should be considered to evaluate the feasibility of a project.

1. Cost
2. Time
3. Technical expertise required

GUESS

This term refers to the ability of a project to increase or decrease in size or scope while maintaining efficiency.

What is it?

Scalability

4

QCM

Which of the following activities does NOT promote sustainability?

- A. Recycling
- B. Deforestation
- C. Use of renewable energy
- D. Water conservation

Deforestation

5

T/F?

A project that can adapt to changes in user needs, technologies, and environmental conditions is considered adaptable.

True or false ?

True

6

TOP3

Name the top three potential obstacles that can affect the feasibility of a project.

1. Insufficient funding
2. Limited technical expertise
3. Regulatory or legal constraints

GUESS

This term refers to a design principle that aims to make products easy to use and understand for a wide range of users.

What is it?

Simplicity

8

QCM

Which one of these is NOT a sustainable practice?

- A. Planting trees
- B. Using solar energy
- C. Overuse of pesticides
- D. Carpooling

C. Overuse of pesticides

T/F?

An adaptable project can function effectively in different geographical locations and cultural contexts.

True or False ?

10

True

10

QCM

Which of these is NOT a sustainable source of energy?

- A. Wind
- B. Solar
- C. Coal
- D. Hydroelectric

C. Coal

11

T/F?

An adaptable project must be able to evolve with technological advancements.

True or False ?

12

True

12

TOP3

List the top three elements that should be included in a feasibility study.

1. Economic Analysis
2. Technical Analysis
3. Legal Requirement Analysis

GUESS

This term refers to the capacity of a project to multiply its impact by reaching more people or locations without a significant increase in resources. What is it?

Scalability

14

QCM

Which of the following is NOT a principle of a circular economy?

- A. Designing out waste and pollution
- B. Keeping products and materials in use
- C. Regenerating natural systems
- D. Mass production without considering waste

D. Mass production
without considering
waste

15

T/F?

An adaptable project is rigid and does not allow for changes in its implementation plan.

True or False ?

False

16

TOP3

Name the top three resources needed for a project to be feasible.

1. Human Resources
(skills, expertise)
2. Financial
Resources (budget,
funding)
3. Material Resources
(equipment,
technology)

GUESS

This design principle aims to make projects manageable and easy to implement, regardless of their size or complexity.

What is it?

Simplicity

18

QCM

Which of these practices does NOT support sustainability?

- A. Overfishing
- B. Composting
- C. Rainwater harvesting
- D. Using public transport

A. Overfishing

19

T/F?

Adaptability in a project is only about dealing with potential problems and not about exploiting new opportunities.

True of False ?

20

False

20
